

## ED Medication Reconciliation Instructions

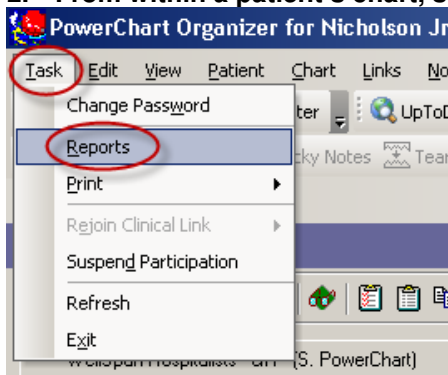

**Beginning February 3, 2010, medication reconciliation will be required for medication orders initiated by ED providers on those patients to be admitted or placed on observation.** This can be accomplished through printing and subsequent completion of the ED Medication Reconciliation Report found on the task menu of Cerner Power Chart. To print this report, follow the steps below.

### **Please note:**

- Reconciliation of home medications will NOT be affected – continue to reconcile these medications by writing them on the Medication Reconciliation Admission Order Form.
- This report shows only ACTIVE medication orders. Medication orders once completed (e.g. one-time orders that have already been administered) become INACTIVE, and will not display on the report (they do not need reconciled).
- By policy, any medication order not reconciled/re-ordered will be discontinued upon admission.

To print the report, follow these steps:

1. Open the patient's chart within Power Chart
2. From within a patient's chart, select Tasks >> Reports

3. Choose ED Medication Reconciliation Report and click 'Print'
